

## TSE/BSE Risk

Gisors, the 14th January 2025

Since 1990, the European Community has adopted a series of measures to protect human and animal health from BSE (Bovine Spongiform Encephalopathy) risk. Such measures are based on the safeguard provisions of Directives on animal-health measures. Given the magnitude of the risk posed by certain TSE (Transmissible Spongiform Encephalopathy) for human and animal health, it is necessary to adopt specific rules for the prevention, control and eradication of these.

Thus, European Regulation (EC) No 999/2001 of the European Parliament and of the Council of May 22, 2001 set the rules for the prevention, control and eradication of certain transmissible spongiform encephalopathies.

In accordance with this regulation and with regard to the information available to us:

- Our suppliers of plastic parts qualified according to our supply requirements under the control of our internal IT111.
- Our suppliers of chemical products that we use (List of chemical products on request), and in accordance with our internal procurement procedure PO HSE 01.

We can affirm that no additive substance of animal origin is used during the assembly of our products on our site of Gisors.

We therefore hereby declare that our valves and equipment produced on our industrial site in Gisors are considered to be compliant under the assessment of the risks of TSE/BSE propagation.

This document follows the regulations in force and just cancel all previous communications on the subject.
